

Please reject the NAB's petition 04-160 that stifles competition and limits the kind of programming that I deserve. This is not a free service. I paid for the equipment and the monthly service fee to receive the content that XM satellite radio provides. A key component of that content is "Instant Traffic & Weather" for the Detroit area. You severely denigrate my service by preventing me from getting this content.

I do not care if the NAB wants the status quo to remain in place forever. I do not care if they dislike competition. I love the content, convenience, and progress XM has brought to my commute to and from work each day. By rejecting their petition, you keep great content coming and generate the type of competition that makes everyone improve, upgrade, and provide better service.

Regards,

Brian M. Victor
